** Flow rates are calculated at a 6m head, the ideal head for a pool design where the plumbing lines are not too long. Allowances must be made where plumbing lines are longer than 8m. where pump is being coupled to a sand filter the pump flow rate should be no more than 80% of the filters max. flow rate. D.E. & cartridge filters can have higher % pump/filter flow rate, although the bigger the filter to pump flow rate, the less often the filter will require cleaning. Also take into account most skimmers have a max. flow rate of 18,000 lph.
