

The Noosa Reef

For hours of fun and lifetime family enjoyment

The only pool in Australia made with structural resin framework ^{*}(See Note). This resin is a revolutionary new material that eliminates any chance of corrosion while guaranteeing incredible durability and allowing the top deck to be one smooth curving radius around the pool. It's crafted for quick assembly and guaranteed to install easily, thanks to a system of patented interlocking parts with incredible lateral strength.

** All external structural parts are resin and the structural resin uprights contain separate galvanised steel posts for extra strength, protected by the resin structural outer from water, corrosion and weathering. The fluted steel walls are Resin Shield protected and resistant to corrosion.*

EZ – Lock System

- Simple, quick installation
- Airtight after proper adjustment
- No extras required – the part is the tool

Deck Cap

Top deck joint covered by an attractive cap.

Indexing system

- Pins anchor the structure at the appropriate points for the desired pool dimensions
- System reinforces structural stability and insures a consistent rounded shape
- Pieces assemble to a perfect fit

Top deck

- Highly precise modular assembly
- All types of liner work with its curved internal ribbing
- Blow moulded resin for superior strength

Tacking System

A specialised system for maximum defective resistance welds the upper and lower sections of the top deck.

Reinforced Corrosion Free Resin Upright

Bottom Wall Channel

- 100% corrosion free resin
- Greater stability through oversized design
- Walls held firm by an elevated rear track

Upright

- Monocoque system with no screws required
- A combination of innovative design and classic style
- Ribbed moulding increases the structure's resistance to water pressure – especially at the uprights' bases, where that pressure is most intense

Slide-in Joiner Plate

- Upright design includes an insertion system for fast, easy installation
- No screws required
- Movement-prevention system provides maximum resistance to water pressure after assembly

Base Crown

A double-lock system around the bases of the uprights provides increased strength and solidity, as well as double protection that keeps joiner plates fixed and firm.
